ANNUAL REPORT

OF THE

Agricultural and Industrial Statistics

AND

CROP REPORT

FOR THE YEAR 1911.

OF THE

LOUISIANA

STATE BOARD OF AGRICULTURE AND IMMIGRATION

UNIVERSITY OF ILLINOIS LIBRARY
AUG 1 1920

I. General Remarks.

II. Stock Raising.

III. Table of Percentages.

E. O. BRUNER, Commissioner.

OFFICE OF LOUISIANA STATE BOARD
OF
AGRICULTURE AND IMMIGRATION

BATON ROUGE, LA., FEBRUARY 15, 1912.

The Louisiana State Board of Agriculture and Immigration, in submitting its annual statistical and crop report for 1911, regrets that it is a little late on account of the tardiness of some of the Assessors in sending in their data, and the necessity of returning the papers to a few of them for correction. With one or two, it seemed impossible to get what the Department had every reason to believe were approximately correct figures, hence letters were written to others in the parish, and, the facts ascertained, justified the effort made to obtain correct figures and further justifies the Department in urging some legislation that will force delinquent or careless Assessors to pay more attention to this important work, for all who are interested in the agricultural welfare of the State want nothing but practically correct statistics.

As will be seen by the figures, some of the parishes that have hertofore led in the production of the principal crop have been passed by others—in fact, the acreage in some exceeded others where production was greater.

Some of the parishes in reporting the valuation of stock give the assessment figures, while others place them at the actual market value, yet with these seemingly inconsistent statements, it is gratifying to feel that Louisiana has never had such a comprehensive report, and such detailed statistical information concerning its various resources and industries as is herewith given to the public.

The tabulated statement, as published, will give full information concerning the resources of every parish except Orleans, and can be carefully scrutinized by those particularly interested, but for general information the following summary is given.

There were in cultivation in the State in 1911, 4,959,142 acres, producing (besides large quantities of hay, potatoes, and vegetables of various kinds, and meat, milk, butter, chickens, turkeys, geese, ducks, etc., which belong legitimately under the head of agricultural products, and which in many parishes are not reported because they are raised only for home consumption) the following result:

333,173 bales of cotton valued at.....	\$16,033,770
26,505,929 bushels of corn valued at.....	15,096,084
617,154,400 pounds of sugar valued at.....	28,858,370
468,862 barrels of molasses valued at.....	2,835,360
132,642 barrels of syrup valued at.....	2,556,125
505,924,204 pounds of rough rice valued at.....	9,753,071
402,724 bushels of peanuts valued at.....	319,578
3,760,390 bushels of sweet potatoes at.....	1,975,978

21 Aug 20 N. E. ERNEST

630.7
L93R
1911-17

Agrib.

1,307,445 bushels of Irish potatoes valued at.....	1,317,783
461,000 tons of hay valued at.....	3,765,610
614,070 bushels of oats valued at.....	376,693
173,600 boxes of oranges valued at.....	262,250
170,800 pounds of tobacco valued at.....	51,240
1,952 carloads of vegetables valued at.....	398,930
1,255 carloads of strawberries valued at.....	824,750
4,054,055 gallons of milk valued at.....	810,811
Total	\$85,236,403

These are the products of the farms as given without accounting for thousands of dollars' worth of stock food, dairy products, vegetabes, etc., not mentioned by most of the parishes; then the melon and fruit crops are to be thought of, and cotton seed with its by-products (oil hulls and meal) must be counted in, and to these we should add the stock that has been raised, and is proving a source of great revenue to many plantations, hence we should add to the.....\$85,236,403

429,317 cattle valued at.....	4,061,262
458 cars of cattle shipped valued at.....	278,350
404,892 hogs valued at.....	982,753
232 cars of hogs shipped valued at.....	111,060
88,367 sheep valued at.....	127,334
Total	\$90,797,162

To this aggregate the other stock in the parishes should be added:

135,804 horses valued at.....	\$6,507,915
139,000 mules valued at.....	9,136,522

St. Landry reports 71,961 horses and mules, and 7,060 cattle, but places no value on them, and they are not included in the above.

To these figure, if we wish to see the real revenues or resources of the parishes we should add the following:

12,247,750 barrels of oil valued at.....	\$8,606,000
200,000 tons of sulphur valued at.....	4,000,000
80,000 tons of salt valued at.....	240,000

Three parishes report 69 gas wells, but the approximate valuation of the output is not given.

As to a further insight into Louisiana's valuation, we report first the land valued at.....\$260,057,027

128 irrigation plants valued at.....	1,216,500
766 miles of irrigation canals valued at.....	3,180,500
146 sugar refineries valued at.....	24,890,030
131 other sugar mills valued at.....	395,700
35 rice mills valued at.....	1,960,000
45 cotton-seed oil mills valued at.....	2,701,250
1,180 cotton gins valued at.....	2,019,085
531 saw mills valued at.....	20,181,763

Total	\$316,601,855
-------------	---------------

1911 cont.

21 Aug 20 directy

St. Landry reports 4 cotton-seed oil mills, 20 gins, and 7 saw mills, without giving a valuation, and hence they are not included in the above, nor has East Baton Rouge included the Standard Oil Company's magnificent plant, capitalized at \$5,000,000.

Among other things, East Baton Rouge has been shipping several hundred carloads of lespedeza hay, which, owing to its great value as stock food, should be a source of considerable revenue to the State.

West Feliciana has also been increasing its revenues by shipping immense quantities of sweet potatoes—in fact, there are many things that can be produced almost in any parish of the State that will bring handsome returns for a little work and attention.

The Experiment Station recently shipped to Boston some cauliflower and sold it for \$4.50 per dozen; another pointer as to what Louisiana can do.

Regarding immigration, 9,492 settlers have come into Louisiana within the year, and the inquiries that are being made and the demands for literature on the Department speak well for the outlook along these lines. Thousands seem to have just discovered the "Promised Land," and when they can see an accentuation of the fact that Louisiana, on less than five million acres of land, is producing over a hundred million of dollars' worth of farm products, and in addition has immense fields of minerals, and great lumber interests, they will feel indeed that they have reached the *ultima thule* of their search.

The statistics given in this report are exclusive of the industries, manufactories, and wonderful resources of the South's great metropolis, for if the immense figures representing the wealth of New Orleans were given, the magnitude of the report would be simply appalling.

In the pamphlet covering the details in their entirety, which will soon be ready for distribution, all the railroads of every parish will be mentioned.

Besides the factories and industries referred to above, there are large numbers of other kinds not mentioned, such as box, barrel and oar factories, brick yards, creameries, feed stuff and fertilizer plants, canneries, packeries, ice factories and many others.

The following comments by some of the Assessors may be of interest to many and are submitted as general information. It is very much regretted that all did not in this way show what their parishes were doing.

AVOYELLES.

This year was very unfavorable on rice; loss to planters about 60%.

The sugar crop promised to be the largest ever known up to the last freezes in November, followed by warm and rainy spell. Small farmers saved this crop, but the large ones were badly hurt. Refiners have lost heavily on account of green cane. Crop compared with last year about 90%, when it promised to be 140. Labor rather hard on planters. Loss by freeze 45%. Shortness of cars for transportation caused loss of about 15%.

ASCENSION.

The cotton crop was a complete failure, caused by excessive rains and boll weevils. Early corn was excellent, but that planted late gave a poor yield.

The sugar crop was one of the most promising for many years, but on account of the early freeze and the cane being green, a heavy loss was sustained by the sugar planters

CAMERON.

I have done my level best to give you an accurate report. The cotton crop has been very short this year; we have had a very poor yield. Corn has not turned out well either.

DESOTO.

The report on number of bales of cotton made, is accurate, as reported by ginners. Cattle from the western portion of the parish were driven to Texas to be shipped on account of the difference in freight rates. Our timber lands include old fields and cut over pine lands.

EAST FELICIANA.

The assessed value of lands average 4-05 for 1911, but I am placing the value whether cultivated or not at \$10. The number of acres does not include about 4,000 occupied by towns and villages, which are estimated without improvements, at \$150 per acre. As a matter of interest, the health of the parish is perfect. There are other industries which are very profitable, such as chickens, turkeys, guineas, ducks and other fowls, which with eggs and the dairy products, make quite a valuable asset to the prosperity of East Feliciana

GRANT.

Boll weevils not so destructive as last year. Corn not as good on account of so much dry weather.

LINCOLN.

The peanut crop as an experiment for the second year has proven a great success, so far as production is concerned. The stand was good and the yield satisfactory, ranging from 20 to 50 bushels per acre; one report of 71 and another of 74 bushels, but the present price (55 to 65 cents per bushel) has given the enterprise a black eye, and a number of farmers are determined to abandon the crop for the coming year.

The cotton crop has been most excellent for the year in almost all parts of the parish. Some report nearly a bale to the acre, and very little damage by the boll weevil.

The cane crop was good, and the syrup of a very fine, clear quality.

PLAQUEMINES.

We have this year made 90 bales of cotton, the major part of which is of the Sea Island variety, quoted at an average of 20 cents per pound.

RED RIVER.

Our parish is growing most all kinds of produce, such as corn, cotton, sweet and Irish potatoes, and almost any kind of vegetable. People are taking interest in good stock-raising, and we are also raising hay. Alfalfa grows fine on the bottom lands.

RICHLAND.

There are several saw mills under construction now, and several are expected to be built very soon. We are expecting another railroad in the near future, which will open up about 100,000 acres of land which are at present unimproved, on account of its inaccessibility to market. More settlers from the central States have come into this parish in the past two years than in the ten years previous. Most of them have come this year. This section of the State seems to have just been discovered. A man can make a living here with less work than any place on earth; this is a lazy man's paradise, but we don't want any more lazy men. We want to monopolize that part of the transaction ourselves, a kind of pre-emptive right.

ST. MARTIN.

About one-third of the cane crop was lost because of the early freeze.

The corn crop was not as good as last year; it was first too dry and then too much rain.

ST. BERNARD.

I have consulted with the sugar planters and, although some of them are not through grinding, they believe that when they finish their loss will amount to 40% or 50%. The cane raised in St. Bernard this year was shipped to the refinery in Plaquemines Parish. Regarding the last windrowed cane, planters say that the delay in harvesting will cause the acidity to descend through

the entire stalk and cause greater, if not an entire, loss of the part of the crop windrowed after the second cold spell. Truck farmers have lost their entire crop of cabbage, the insects destroying the young plants.

ST. JOHN.

In sending my report for the year 1911, I wish to explain that out of the 37,131 acres that I report as cultivated land about 3,000 acres of same were left to grow in weeds to renew the land for the cultivation of rice in 1912.

Two sugar houses have not quite finished grinding, but the yield is so poor now that it will not materially effect the figures as given.

ST. MARY.

The yield of sugar per ton from the start was very unsatisfactory. The cane, owing to the warm and wet weather, was very green, and then came the early freeze, which was a calamity. The loss is variously estimated from 10% to as high as 40%. The Cypremont section seems to have fared better than the Teche country, for they were getting at one time from 132 to 150 pounds, while on the Teche the planters were getting from 90 to 110 pounds. Had we not had the freeze, the crop would have been the largest for years. In comparison, the small farmers and tenants are the heaviest losers.

TANGIPAHOA.

My report is as accurate as it is possible to make it; in most cases, the figures are correct. I am sure the entire report is nearer correct than those made and sent to the United States Government because it is taken from all over the parish, having a deputy residing in each ward.

VERMILION.

The crop condition was fine until harvesting season, but there was too much rain to harvest the rice crop. About 25,000 sacks of rough rice will be completely lost.

The cold weather, accompanied with ice, has done untold damage to the cane farmers, and it is hard to estimate their loss.

The oranges did not do well this year, because the trees are being destroyed by what is called "scale."

Totaling everything, the farmers will make about three-quarters of a crop.

WEBSTER.

Regarding prices of land, the cut-overs (or agricultural lands, as this is not long-leaf pine timber territory) can be bought at prices ranging from \$3.00 to \$12.50 for cash. Improved lands sell from \$5.00 to \$30.00; not near towns or market, \$10.00 to \$15.00.

Not much hay is baled.

Cotton statistics correct to last day of ginning.

WEST BATON ROUGE.

There is quite an amount of the cane crop still left in the windrows, and it is difficult to estimate the final output, as a portion of the cane may be entirely lost. The present disastrous season is due to terrible weather conditions, an early freeze, very green cane and heavy tonnage, with very poor yield of sugar per ton, has demonstrated that the present system of purchasing cane by the ton at a given amount per cent based on the average price of Prime Y. C. sugar in New Orleans market during week of delivery is very disappointing and unsatisfactory to all parties concerned, and I suggest a change. The price to be determined by the sucrose contents of cane on polarization.

STOCK RAISING.

An industry that is now forging its way to the front and which bids fair to rank as one of Louisiana's greatest assets is stock raising. The tick (or Texas) fever, as the disease is called, whose source is traced to the tick, has been the great drawback to cattle raising, as it has been almost impossible to bring from other States better breeds of stock, and the only success attainable was with the hardy native scrubs that were immune, but they were neither first class dairy cows nor beef cattle. Thanks, though, to science, all this has been changed. The dipping vat with arsenious baths has been introduced and tick eradication has been so successful that Louisianians are rejoicing in the fact that when the source of yellow fever was traced to a certain kind of mosquito it could easily be handled and prevented, and the source of Texas fever having been traced to the tick, the dipping vat was discovered, and today there is no apprehension for man or beast concerning those two once-dreaded scourges. So, too, with hog cholera. By vaccination the world prevents smallpox and by vaccination our hogs are made immune from cholera. Hence it is gratifying to think that Louisiana, whose average acreage production is greater than any agricultural State in the Union, notwithstanding the fact that only five million acres of her twenty-eight millions are in cultivation, that her mild climate, her green grasses of winter, her splendid soils for hay, corn, potatoes, peanuts and beets, with black strap molasses, cotton-seed hulls and meal, rice bran and polish, backed by innumerable streams of limpid waters or flowing artesian wells at depths of from 200 to 600 feet, make this an ideal place for that great industry—stock raising.

Sheep prosper in many portions of the State, and as fine mules and horses are raised as can be found anywhere—some raisers have sold one-year-old thoroughbreds at one thousand dollars cash and now that Louisiana has a well-organized Live Stock Sanitary Board no one need have apprehension about going into the live stock business.

†St. Landry reports 25,000 acres in sugar cane, but gives no output of the crop except that 300 carloads of cane were shipped.

†East Baton Rouge reports 12,000 acres in cane, but gives no yield or number of cars shipped.

\$40,000 tons.

§St. Martin does not give the yield of cane, but claims to have made a crop worth \$1,600,000, shipping to different refineries.

Caddo gives the oil output at 8,112,500 barrels, value of which is about \$6,000,000.

*Calcasieu reports 40 oil wells and 14 others drilling.

Ouachita reports output of gas wells very limited.

Calcasieu's sulphur output is 200,000 tons per year, worth about \$4,000,000. The oil output is about 2,135,250 barrels, valued at about \$1,606,000.

†St. Martin has 3 wells, 400 gallons per day, undeveloped.

HON. E. O. BRUNER, Commissioner.

BATON ROUGE
RAMIRES-JONES PRINTING COMPANY
1913.

ISSUED BY
LOUISIANA DEPARTMENT OF
AGRICULTURE AND IMMIGRATION

HON. E. O. BRUNER, *Commissioner.*

The Louisiana State Bureau of Agriculture and Immigration is a little late in submitting its statistical and crop report for 1912, but it was much better to postpone it until practically correct data could be obtained, and we are herewith presenting more detailed statistiscal information than has ever been given before concerning the crops, minerals, various resources and industries of the State of Louisiana.

Every parish responded to the Commissioner's call except Iberville and Lafayette, and they failed to do so, notwithstanding the fact that they were written to four different times and earnestly requested to answer the questions propounded.

A reference to the tabulated statement will give, in a concise but easily comprehended way, all necessary information concerning the wonderful resources of our great State.

For the year 1912 the following crops and resources are reported:

368,217 bales of cotton, valued at.....	\$18,200,439
25,455,086 bushels of corn, valued at.....	15,035,489
256,706,740 pounds of sugar, valued at.....	10,507,942
289,281 barrels of syrup and molasses, valued at	2,781,818
406,374,350 pounds of rough rice, valued at.....	8,273,901
439,850 bushels of peanuts, valued at.....	332,205
2,948,630 bushels of sweet potatoes, valued at...	1,751,542
1,125,900 bushels of Irish potatoes, valued at....	1,015,613
322,840 tons of hay, valued at.....	3,653,527
791,410 bushels of oats, valued at.....	432,470
208,050 boxes of oranges, valued at.....	258,025
192,900 pounds of tobacco, valued at.....	96,450
981 carloads of vegetables shipped, valued at	263,980
605 carloads of strawberries shipped, val- ued at.....	582,050
12,516,400 barrels of oil, valued at.....	9,387,300
475,000 tons of sulphur, valued at.....	9,500,000

21 Aug 20 N. E. ERNEST

630.7

1912

MISSOURI BOTANICAL GARDEN LIBRARY
AUG 4 1920

200,000 tons of salt, valued at.....	1,000,000
4,246,775 gallons of milk, valued at.....	1,293,925
799 carloads of cattle shipped, valued at..	448,760
129 carloads of hogs shipped, valued at....	77,830
3,944,316,786 feet of lumber, valued at.....	39,962,135
Output of 159 other factories, valued at.....	15,067,000
Output of 21 canning factories, valued at.....	392,100
<hr/>	
Total	\$140,314,591

The above are the products of the farms, the factories and the mines exclusive of the parishes which failed to send in their data, and from Orleans, which is never included in the country statistics.

From these figures it will be seen that two of the staple crops were smaller than the year previous, but the aggregate of all crops in the State was larger, emphasizing the great desideratum of diversification of farming and that the propaganda for such is beginning to bear good fruit. It must be borne in mind, however, that there are thousands of dollars' worth of stock-food, dairy products, vegetables, melons, fruit, cotton seed with its by-products (oil, hulls and meal), and seed of Louisiana's splendid hay—lespedeza—which are given no account of in the above figures.

And we should add as the producing elements of the various amounts given above—

118 irrigation plants, valued at.....	\$ 1,245,500
800 miles of irrigation canals, valued at.....	2,573,000
102 sugar refineries, valued at.....	19,742,000
213 other sugar mills, valued at.....	2,211,400
39 rice mills, valued at.....	2,410,150
1,132 cotton gins, valued at.....	1,516,280
488 saw mills, valued at.....	24,795,820
159 other factories, valued at.....	7,711,080
142,073 horses, valued at.....	6,712,712
120,762 mules, valued at.....	9,473,034
496,920 cattle, valued at.....	5,087,285
243,325 hogs, valued at.....	780,479
95,604 sheep, valued at.....	173,338
39 cotton seed oil mills, valued at.....	2,410,150

The aggregate figures as given above amount to....\$227,156,819

1912 cont.

21 Aug 20 direct g

To which should be added the valuation of the 27, 600,247 acres of land.....	266,056,456
Total	\$493,213,274

Twenty-one canning plants are reported, but no valuation given.

Seventy-three gas wells reported 600,000 feet per day, but no valuation is given.

Besides these figures there are 141 saw mills that give neither their valuation nor the output, which would swell the lumber industry to far above four billion feet per annum.

When we take into consideration that the State of Louisiana has less than five million acres in cultivation the figures given are simply marvelous and prove beyond the shadow of a doubt that immigrants will find the other twenty odd millions of acres a veritable El Dorado.

Nineteen parishes report that during the year 1912, 1646 new settlers have come from various parts of the country—Ohio, Indiana, Illinois, Iowa, Nebraska, Minnesota, Mississippi, New York, Nova Scotia, and Hungary. Now, if nineteen parishes report an average of 86 each and the same ratio holds good throughout the State, we may fairly claim that 5,000 immigrants have settled among us within the last year, and if Mr. Carnegie is correct in his assumption that each immigrant is worth \$1,000 to any State, then Louisiana has accumulated \$5,000,000 additional in that short space of time.

Eighty-nine navigable streams are reported in the State with 5519 miles navigable.

Every parish in the State, except one, reports railroads—from one to eight different lines.

A careful perusal of the three accompanying papers will convince any home-seeker that Louisiana has many advantages they never dreamed of and it would be well worth their while to investigate before casting their lot among other people.

The first is the opening or welcoming address of Hon. E. O. Bruner, Louisiana's Commissioner of Agriculture and Immigration, at the meeting of the Southern Commissioners of Agriculture at New Orleans, August 26, 1913.

The second is also an address of Commissioner Bruner at the opening and dedication of the United States Immigration Station at New Orleans, March 27, 1913.

The third is an address that was delivered by Dr. W. H. Dalrymple, of the Louisiana State University, at the meeting of the Southern Commissioners of Agriculture, August 26.

ADDRESS DELIVERED AT THE MEETING OF THE COMMISSIONERS OF AGRICULTURE, APRIL 26.

By HON. E. O. BRUNER.

Gentlemen:—I deeply appreciate the honor that has been conferred upon me in selecting me to preside over this most important meeting—one of the most important ever held in the South.

This is a meeting of the Commissioners of Agriculture and Immigration of the Southern States. Its object is to organize and for the Commissioners to become better acquainted with each other; to exchange ideas; to give each other the benefit of our experience; to adopt measures whereby the tide of immigration from the Northern and Western States might be diverted Southward; to place before the world in an intelligent way the natural advantages, resources and possibilities of our respective States and that of the South as a whole; to let people know that the South has more to offer the home-seeker for less money than any other part of the United States or, perhaps, the world.

As Commissioners of Agriculture it should be our constant object, purpose and determination, as it is certainly our duty, to devote our entire time, our energy, our ability, to the assistance and protection of the farmer.

Our offices should be a place of refuge for the farmer, a place where he might unhesitatingly go for help and assistance, for suggestions and advice. Our every effort should be to assist the farmer in improving his farming methods, to cultivate more extensively and intelligently; to improve the breed of his stock, and to take better care of his horses, cattle, hogs and sheep; to take full advantage of the blessings of nature with which he is surrounded; to build better roads; improve the drainage; live better and more cheaply by raising what he eats and canning and selling the surplus; to learn the nature of the soil and the proper use of fertilizers and prevent the farmer from being duped by unscrupulous manufacturers of fertilizers and feed-

stuffs; to learn the food value of the various foodstuffs and feed his stock in an intelligent way; to help organize and maintain agricultural fairs, as a properly conducted agricultural fair is the most valuable lesson that can be given upon practical agriculture. It is a great object-lesson. It teaches by contact and example where seeing is believing. They are the time-keepers of progress. They record the world's advancement. Every fair, great or small, has helped to some onward step.

These are some of the many duties a Commissioner of Agriculture and Immigration has to perform. Our duties are arduous and difficult, requiring constant attention and unending labors, but they are most important, most vital, to the prosperity and welfare of all the people. Neglect of any of our many duties will result in loss to all, for upon the farmer's success depends not only the success but the very life of the rest of us. He furnishes us with the food we eat and the clothes we wear; not only this, but he provides for our mental welfare by supplying the materials out of which paper and books are manufactured, and in spiritual and moral matters the rugged, honest farmer, living close to Nature and Nature's god, is the safeguard of religious liberty and freedom.

So, my friends, let us get together and combine our efforts, our energies and our abilities and, with willing hands and hearts and with an eye single to the welfare, prosperity and happiness of our glorious South, leave no stone unturned, no duty unperformed, in our efforts to assist and make happier and brighter the lives of the farmers—that noble band of men and women upon whom rest the burdens and responsibilities of feeding and clothing the world, and from whose loins must spring, as spring it will, the future greatness of the manhood and womanhood of our country, and by whose standard of civilization, culture and refinement the nation will be judged.

Ah, my fellow Commissioners of Agriculture, the helpers, leaders and friends of these men and women, our work is most noble, most important and deserving of the very best in us.

Now, my friends, in the name of the thousands of farmers I represent in this grand old Pelican State, this old State which seems to be the chosen spot of the gods, where Nature ever smiles, where ever blow the gentle breezes from the Southern sea, where cotton, corn, cane and rice, growing side by side, make this a veritable garden of Paradise, I welcome you.

ADDRESS DELIVERED AT THE OPENING OF THE
UNITED STATES IMMIGRATION STATION
AT NEW ORLEANS ON APRIL 27.

By HON. E. O. BRUNER.

Gentlemen:—I am indeed glad to be present at the opening of this immigration station; it's a magnificent station and fills a long-felt want.

The people of New Orleans, the State of Louisiana and the South generally should congratulate themselves on this achievement.

My friends, if we ever expect to build up Louisiana and the South generally, put those millions of acres of idle lands into a state of cultivation, we must induce immigrants to come to our country and assist us. No part of this United States ever built up except through that channel. We, of course, don't want the riff-raff and the scum of other countries. We have no room, nor do we extend an invitation to such people, neither will we welcome them to our shores; but we do want, invite and will welcome honest, industrious people to our Southland, it matters not from whence they come.

Gentlemen, we must admit, notwithstanding the many knocks and setbacks the South received in the last half century, it has gone forward by leaps and bounds, and we should congratulate ourselves and those brave men and women who have gone before us, for the magnificent fight and great progress made under such adverse circumstances.

But, with it all, the South today is only in its infancy, and its future greatness and its possibilities are beyond any man's comprehension.

The Agricultural and Immigration Department has done everything possible since I have been at its head, with the little means at my command, to build up Louisiana agriculturally and to induce immigration to our State and to turn the tide of immigration from the Eastern, Western and Northern States to our Southland, and help us build up and put into a state of cultivation the millions of acres of rich lands now idle. But for the lack of an Immigration Station we have been somewhat handicapped.

We do not only invite the immigrants to come to Louisiana, but we encourage them by every way possible to remain after

they come. We send an experienced and practical farmer, without a cent of cost to the immigrant, to teach him how to prepare his soil for cultivation, how to select seed and the kind best suited for this climate, and his soil; how to cultivate their crops and assist them in finding a market for same.

We investigate their complaints, when the same is made known to us; we locate the trouble and most invariably settle it amicably and satisfactorily, and around them we place the strong arm of the law.

Mr. Justin F. Denechaud, my secretary of immigration, has a man that speaks several languages meet the immigrants on their arrival, ascertain their wants and assist them in getting homes, or work, as the case may be.

Now, gentlemen, with the opening of the Panama Canal, the establishment of this magnificent Immigration Station, a live Commissioner of Agriculture and a live secretary of immigration, thousands of people of New Orleans and throughout the State helping us sing the praises, and placing before the world in an intelligent and business-like way the advantages, possibilities, and greatness of this, the garden spot of the world, I can but see a great future for Louisiana, and New Orleans should, and no doubt will in a short time, reach her million mark.

Notwithstanding our many natural advantages over other countries, the many blessings that God has bestowed upon us, such as rich soil, pure atmosphere, healthy climate, mild winters, cool summers, fresh and salt waters filled with oysters and fish of every kind and variety, the best and choicest timber, oils, gas, sulphur and salt in unlimited quantities, and everything on His footstool to make a man happy—we have knockers, men going around and knocking this grand old State of ours. But, thank God, we have boosters enough to overcome such influence and place Louisiana where she properly belongs—second to no State in the Union.

SOUTHERN LIVE STOCK POSSIBILITIES, WITH SPECIAL REFERENCE TO LOUISIANA.

By DR. W. H. DALRYMPLE, Louisiana State University.

Mr. President and Gentlemen:—The older men in my audience may not live to see it, but the day is fast approaching

when, in my humble judgment, the South will be the great stock-raising section of this great country; and more particularly, perhaps, our meat-producing animals.

It is but a month or two ago that I heard no less an authority than Hon. James Wilson, ex-United States Secretary of Agriculture, make the remark that the country would have to look to the South for its meat supply.

The great cattle ranges of the West are rapidly being placed under cultivation to meet the demands of an ever-increasing population, both natural and through immigration, who have to be provided with occupations, and whose stomachs have to be filled. In fact, one of the great economic problems of the day seems to be to increase the producing capacity of the soils of the country to keep pace with present-day needs, and the gradually enlarging demands of the continually increasing numbers which are growing by leaps and bounds.

It is our belief that the South will ultimately have to come to the rescue, and we also believe that, later, she will be equal to the occasion.

We have recently heard so much about the high cost of living, and the many attempts, theoretical and otherwise, to reach the true solution. What part, if any, it may be asked, has Southern agricultural conditions had to do with this state of affairs; or in other words, if agricultural conditions in the South had been in keeping with her possibilities, in the production of the daily necessities of our people throughout the country, in the matter of foods, both vegetable and animal, would those conditions have been possible, or at least, likely, at the present time?

Take as an illustration the high price of beef which recently obtained on the great markets of the country, such as Chicago, where \$11.00 per 100 pounds, were paid for steers on the hoof. Were they Southern steers that brought such a price? No! Why? In the first place, and in a general way, the South does not, as yet, raise the quality of animals that could command such a price. And in the second place, if she did, she could not, at the present time, reach the best markets in the North and West because of Federal quarantine regulations being imposed upon our cattle on account of the presence of that expensive pest, the cattle tick; but whose total extermination, I am glad to be able to say, will be completed in a very few more years.

True, the cattle tick has been the most serious factor that has militated against our progress in the production of improved cattle. But, that which has mainly obstructed the general agricultural prosperity of the South, and which I believe we all now realize, has been our almost universal system of single-cropping. Doubtless, and on account of the world-wide need for cotton, this system has brought large returns to our people, for the time being, so to speak; but under a system in which every other necessity of the farm, or plantation, and home, had to be purchased and paid for out of those returns, has the system increased the fertility of our soils? Increased their producing power, and otherwise enhanced their value? I think not. On the other hand, had our general system of agriculture been more along the lines of diversification and crop rotation, including cotton, and of course live stock; and with intelligent fertilization; with increased yields of both cash crops and those for consumption by our farm animals, and with a sufficiency of the latter crops to bring to prime market condition the meat-producing animals, such as cattle, hogs, and sheep, and through them to market the farm feeds and forages at an enhanced value, conditions might have assumed a very different phase. I say, had such conditions prevailed, these many years, and with the South on an equal footing with her neighbors in the North, East, and West. in the great marts of the country, is it reasonable to presume that the cry of high-priced food, which by some economists is credited to shortage in production, would have been heard all over the land? The fact is, that, up to the present, the South has scarcely been reckoned as among the purveyors of the nation's food supply. However, this condition of things has got to change, in fact is doing so very rapidly; and it is our humble impression that before many decades have come and gone, the South will not only be able to clothe our people, as she has been doing, but will have a large share in the feeding of them, as well, with the cereals and their by-products, and with toothsome meat from her well-bred, well-fed, and high-grade, cattle, hogs, and sheep.

But when making such a statement as the foregoing, one should naturally be prepared with some facts to substantiate it.

In the first place, let us glance briefly at some of our possibilities. Every one must admit that our climate is ideal for live stock husbandry, in all of its different departments, from the

growing of the food crops to the finishing of the product for market.

Forage crops, in great variety, grow with a luxuriance that would "tickle the palate" and "whet the appetite" of the most fastidious and epicurean of our herbivorous animals.

Alfalfa, which has been termed the "prince of forage crops," has wide areas devoted to its growth, and is extensively used for grazing, for soiling, and for hay.

Our great Southern clover, *Lespedeza striata*, makes not only a most valuable leguminous hay, but has tended to greatly enhance the value of our Southern pastures by spreading over our lands and mixing with our native grasses.

The cow pea, which in nutritive value about equals alfalfa, revels in all its glory in its Southern home.

The clovers, also, and some of the vetches, grow vigorously, and furnish abundant and nutritious food for live stock.

In short, we have almost a superabundance, both as to quantity and variety, of these most valuable nitrogen-gathering, soil-improving, and protein-producing, plants, so important for the upbuilding and maintenance of our soils, as well as the nutrition of our farm animals.

In the Gulf States, especially, pasturage may be secured all the year round, by sowing almost any of the small cereals as catch crops after the staple crops have been harvested, which yield excellently during the fall and winter months, and furnish succulent food at a season of the year when such is in greatest need.

Root crops, also, produce with great abundance, and may be made to supply excellent succulent feed for cattle, hogs, and sheep, when our regular pastures have been depleted by the summer's grazing.

Small grains of different varieties can be successfully raised, and make maximum yields, in most sections of the South. And as regards that great American cereal, corn, it is only necessary to allude to the magnificent results that have been obtained by our Corn Club boys to realize what wonderful possibilities are ours in the matter of corn production—possibilities, in fact, never dreamed of by the older farmers themselves, the fathers of these boys.

But while this might appear as more than sufficient to meet all practical needs in live stock food production, it is by no means all.

Added to what we have just enumerated are the by-products of our cotton fields, and in some of our States, and in addition, the valuable by-products of our rice fields, and of our sugar factories in the form of low grade feeding molasses, which now yields an annual revenue to the planters of this State of somewhere in the neighborhood of \$1,000,000.

With such possibilities, then, in the matter of food production, our abundance in cereal crops; our many nutritious hay, and other roughage supplies; our winter pasture crops; and the rich concentrates in the by-products of our cotton, rice, and sugar, if the South should not appeal strongly, even to the most casual observer, as the stockman's paradise, where on earth would he go in search of it?

So much for our possibilities in the production of feeds and forages. But, and it seems superfluous to make the statement before this body of Southern agricultural leaders, improved live stock is a necessary adjunct to every well-regulated farm, the aim of the agriculturist being to possess animals, not out of mere sentiment, but to be able to use them as local factories, if you will, to convert the cheaper raw materials grown on the farm into higher-priced finished products in the form of high-class beef, mutton, pork, etc. Or, in other words, to market the raw materials on the hoof. And besides, having the rich manurial excrementitious matters, as a free gift, more or less, to return to the land to maintain or increase its fertility, and add plant food for the use of future crops.

An arable farm, at least, without its adequate quota of improved live stock, is an inharmonious enterprise; a sort of discordant undertaking, which Fitzherbert, a writer on husbandry away back in the 16th century, realized when he said: "An husbände cannot well thryve by his corne without he have other cattell, nor by his cattell without corne, for els he shall be a buyer a borrower, or a beggar."

In some parts of the South, we, unfortunately, have not as yet fully realized the truth of this true, though somewhat trite, statement, which is no doubt due to our hitherto system of farming, and to our energies having been bent upon the production of practically one crop, to the well nigh total exclusion of other

varieties of farm crops and of improved livestock. The latter, more particularly cattle, sheep, and hogs, have had to endeavor to raise themselves as best they could, or die in the attempt.

The remark is sometimes passed, that the South is a splendid "poor man's country," on account of the comparative ease with which a living may be made. But what would be the result did our lands receive the treatment which would be bestowed upon them by a more modern and intelligent system of husbandry; where the farmer made a thorough study of his profession or calling; made a business of farming, rather than a means to eke out a mere comfortable existence; who built up his soils; aimed at maximum production; kept up with the markets; varied his products in both field crops and live stock; rotated his crops and strived to produce nothing but the very best his land would yield, and that the market demanded?

This is, indeed, a question to which it would be almost impossible to find a feasibly accurate reply. And yet, while some of our remarks might possibly be construed into a reflection upon some of our former methods, it is also a most eloquent endorsement of the tremendous fertility of our soils, that they have been able to even support such methods.

However, a change is gradually coming about for the better. In the language of the "good book," "old things are passing away, and all things are becoming new." The markets of the world are growing closer through greater facilities in transportation; competition is becoming keener; and to keep up with the procession, we are becoming alive to the fact, that we must "get a move on." We are becoming convinced of the necessity for improvement all along the line.

Since the advent of the boll weevil, it is remarkable the improvement that has taken place in our live stock conditions. In Louisiana, and I presume it is not different in other Southern States, associations have been organized in the interest of each variety of farm animal. Louisiana has her State Agricultural Association with which is affiliated all other organizations of an allied character.

We have our Jersey Breeders' Association, which has tended to bring that breed of dairy cattle to great perfection in the State.

We have our Beef Cattle Breeders' Association, more recently organized, however, but which it is hoped will tend to conserve the interests of the breeders of our beef animals.

We have a live organization in our State Swine Breeders' Association, also, which is doing excellent work in looking after the welfare of the producers of that valuable meat animal.

So far, we have not been able to get the sheep men together, largely because that little profit producer has hitherto been treated more as an outcast than as a valuable adjunct to the farm. At the same time, it cannot be so very long before this profitable little animal with the "golden hoof" will be brought into the "fold" with the rest of the organizations, as there is a future for sheep husbandry in the South that our people do not seem to have as yet realized. Think of it; for the past several weeks, there has not been a single sheep quoted as having been received in the stock yards of this great city of New Orleans. And further, it has been estimated by competent authority, that of all the mutton and lamb consumed in the city of New Orleans, less than 1 per cent. is raised in the great State of Louisiana. What an opportunity some people are missing by not raising a few good sheep on their farms. In fact there ought to be a small flock on every farm.

Horse and mule breeding also come in for their share of attention.

In some Southern States this industry is much more forward than in Louisiana, but an increasing interest is being manifested. We have our State Trotting Horse Breeders' Association, which, I may say, is more for the improvement of the light harness horse than to encourage the sporting feature, as such.

Not only have most of the Southern States displayed advancing interest along all of these lines, but most, if not all, have taken steps to protect, from the ravages of fatal animal diseases, each one of these industries. I refer to the enactment by the State Legislatures of suitable live stock sanitary laws, and the creation or appointment of Boards or Commissions, to carry them into effect. Speaking for Louisiana, I may say that she has one of the best live stock sanitary laws in the United States.

Such laws not only afford protection to the live stock interests of a State, but they give encouragement to prospective immigrants who expect to engage in live stock husbandry along with general farming when they reach their new homes in the South.

I previously referred to the cattle tick, which has been, and, so long as it is with us, will be, the greatest drawback to the cat-

the industry of the South generally. However, as I said before, it means but a few years when this parasite will be of interest only as a matter of history. This may be clearer to some of you not so familiar with what has been going on in tick eradication in the South, if I quote the following figures:

The original area of Southern country infested with ticks represented 741,515 square miles. This was the extent of territory that had to be tackled when the co-operative work of the Federal Government and the Southern States began in August 1906. On October 15, 1912, or just about six years, the area absolutely cleared of ticks and placed above the Federal quarantine line, was 167,714 square miles. And this, notwithstanding the crude methods adopted when the work first began. This means, that the cattle owners and raisers in the territory cleared have as free access to the best markets as those in any other part of the country which never had ticks. And this is the great object of tick eradication in the South, viz., to open the markets of the world to our people whenever they have cattle to sell, and want to sell them in the best markets. Until the ticks have gone, however, those markets are closed to them.

I might add here, that the area freed of ticks in the South represents just about a quarter of the originally infested territory, which has been accomplished in about six years. In my humble judgment, the other three-quarters will be cleared about as quickly, if not sooner, on account of the more modern methods of tick eradication—the dipping vat and the standard arsenical solution—the greater co-operation, in fact desire, of the people themselves, which was considerably lacking at the commencement of the work, and all other things which seem to be aiding in the eradication work. It seems impossible to conceive of anything that could give greater impetus and encouragement to the cattle business in the South than the total extermination of this pest, which not only is the carrier of the Texas fever organism, but the great cause of mortality amongst even our native animals, through depletion from the blood-sucking propensities of the tick.

What does freedom from ticks mean to the South? It means better animals from north of the present quarantined area to improve our own stock; it means better cattle, both beef and

dairy, upon our own farms; it means an open market whenever we get ready to ship, and without any restrictions whatever; it means better farming; and it means more and better immigration of the desirable farmer-stockman class.

In summing up these remarks, then, what, it may be asked, are some of our chief needs?

I believe all of us are convinced of the South's unexcelled possibilities in the matter of livestock production, and of which many of our own citizens have already taken advantage, with profit to themselves.

We already have, or can have, an abundance of food materials for animals that would surprise even a northern or western stockman, and make him long for the opportunity to avail himself of such exceptionally advantageous conditions, was he but familiar with the true facts in the case.

We have broad acres of unoccupied fertile land that are simply awaiting the touch of the intelligent husbandman in order to spring into full fruition, and add more wealth and prosperity to our Southern country.

We have representatives of almost every breed and variety of livestock, and an increasing interest constantly being manifested in their development.

We have adequate legislation in practically all of the Southern States to afford protection against the fatal diseases to which farm animals are susceptible, and which gives encouragement to those engaged in the industry.

We have our State Boards of Agriculture to look after and foster the industry from the standpoint of the State.

We have our Agricultural & Mechanical Colleges; our State Experiment Stations; our Farmers' Institute, Agricultural Extension, and Farm Demonstration, workers, all bending their efforts to educate our citizens, and encourage and increase the interest in this great work.

In other words, we have many and very important agencies, scattered all over and laboring for the good of the cause, which are being more and more taken advantage of by our home people, and through which rapid advancement is taking place.

What, then, are some of our needs?

In the first place, we need more and better livestock through which to market our food crops, and help maintain or increase the fertility of our farms; and we need our own people to give more time and study to the rational and business sides of animal husbandry and of general farming.

Secondly. We need an open market, in the best marts of the country, especially for our cattle, which solely depends, however, upon the total extermination of the cattle tick from the Southern States, and upon which depends, likewise, the improvement of our cattle through the influence of improved animals, particularly males, from the best herds of the country; and in the

Third place, we need Immigration. And in this regard, we need the desirable, intelligent, industrious, farmer-stockman, whose life and business experience have hitherto been devoted to the branches of agriculture and stock raising which we believe the South stands in greatest need of for her upbuilding in those directions.

Good object-lessons are, in great measure, what we require; and this is the sort of help we want to assist in developing our great natural resources along the line of animal husbandry, as well as other branches; and I question if there are any more capable, in this country at least, of rendering us such assistance than our progressives friends from the North and West, if we can only impress more of them with our immense Southern agricultural possibilities.

To such I would like to say—and I feel sure you would all join heartily in the refrain: We want you; we need more of such citizenry to help us build up this great Southern section of our country to its maximum capacity. Come, and continue to keep coming, until our vast expanse of rich, unused and uncultivated lands, which at present exist, is converted into well-tilled farms, with happy homes, and the hum of agricultural machinery is heard all over the South replacing the sound now produced by the wind rattling through our mighty forests.

With the influx of such desirable immigration; the merry laughter of happy children; the lowing of contented cattle; the bleating of frolicsome flocks; and the suppressed grunt-of-satisfaction of the fattening "mortgage lifter," all issuing from a thousand homes and farms, adding volume to the melody of industry and prosperity; and the stimulus all such would give our own people to greater deeds along progressive lines; with the fertile lands of the South forced to yield their locked-up treasures, and stimulated to maximum crop and animal production, then will possibility be changed to reality, and the world will realize and know, that this Southland of ours—with special emphasis on the Pelican State, of course, which has been made out of the choicest fertility of so many other States, having been drawn from them by the great "Father of Waters," and carried hitherward on his mighty bosom—is the choicest and most desirable section of this great American Union.

The following tables are compiled from data furnished by the assessors from each parish and, though some few of them have been negligent and careless, yet the work, as a whole, is practically reliable. A summary of this report was read to the Commissioners of Agriculture at their recent meeting in New Orleans and there were present some gentlemen who took issue with us on some of our figures, one claiming that our report on the shipment of strawberries and vegetables from his parish was entirely too low and that he would furnish accurate data from the railroad agents and fruit growers' associations, and we regret very much that he failed to do so, as we would have taken great pleasure in inserting it here, for truth—and nothing but the truth—is what we want to publish about Louisiana.

As an illustration, though, of how criticisms are made, a gentleman asked us how many sheep we reported in his parish. We replied:

"About 3,000."

"There is where I *know* you are wrong," said he, "for I know positively of 2,000 on one plantation."

“All right; but how many other places do you know that have any at all on them?”

After studying a moment, he said: “Well, really, I don’t know of any, but if one party is doing so well with a flock of 2,000 there must be more in the same parish.”

However, the other thousand, much to our regret, can not be found.

We invite a careful investigation of these figures and ask that if inaccuracies are found and can be substantiated that this department be informed thereof.

ANNUAL REPORT OF THE AGRICULTURAL AND INDUSTRIAL STATISTICS AND CROP REPORT FOR 1912.

ANNUAL REPORT

OF THE

Agricultural and Industrial Statistics

AND

Crop Report for the Year 1913

OF THE

Louisiana Department of Agriculture and Immigration.

-
- I. GENERAL REMARKS.
 - II. TABLES OF PERCENTAGES.
-

HON. E. O. BRUNER, Commissioner.

OFFICE OF
Commissioner of Agriculture and Immigration.

BATON ROUGE, LOUISIANA,
February 25, 1914.

The Louisiana State Bureau of Agriculture and Immigration in submitting its Annual Agricultural and Industrial statistics for the year 1913 is cognizant of the fact that some figures cannot be given as positively accurate, but those we give are furnished by the assessors and many of them have been corroborated by other parties who were in positions to judge of such matters. Most of the assessors of the State whose duty it is to furnish this data are conscientiously performing their duty, but there are a few who never put themselves to the trouble of even trying to get this information.

This data is all compiled and printed in such a form as to furnish information to all persons who wish to be posted about Louisiana—the pamphlet is sent broadcast over the world and is perhaps the only publication containing so much information in a concise and succinct form that can be reached by anybody who is seeking such—hence the absolute necessity of accuracy—and it would be well for the State to absolutely require those to whom this work is assigned to comply with the law and the only way possible appears to be an amendment to Act 42 of 1900, making a provision to the effect that no assessor shall be settled with by the State for any of his work until this specific part is also included in what has been performed—then the State can boast of having one of, if not the best, system of gathering statistics that could be devised.

We believe the report submitted is as accurate as can be obtained. All the parishes except one or two have responded to the Commissioner's call.

By assuming that those not reporting made crops with an average about as the others, we feel that we can safely add one million bushels of corn and one hundred million pounds of sugar, but we give below the figures as gathered, showing that cotton without counting its seed still leads, with corn a close second, sugar third and rice fourth. The lumber industry, with an output of nearly four billion feet valued at over fifty millions of dollars, is one of the great industrial leaders of our State.

We shall publish in pamphlet form a tabulated statement of the agricultural and industrial statistics of the State, by parishes, but a summary is as follows:

422,686 Bales of cotton, valued at.....	\$ 21,518,075
34,087,062 Bushels of corn, valued at.....	21,036,484
480,346,707 Pounds of sugar, valued at.....	16,888,509
349,004 Barrels of molasses, valued at.....	1,882,987
224,799 Barrels of syrup, valued at.....	1,993,732
546,907,230 Pounds of rice, valued at.....	8,891,289
232,350 Bushels of peanuts, valued at.....	224,325
5,536,707 Bushels of sweet potatoes, valued at.....	2,814,871
1,169,250 Bushels of Irish potatoes, valued at.....	933,125
1,246,510 Bushels of oats, valued at.....	662,652
327,912 Tons of hay, valued at.....	3,345,301
135,000 Boxes of oranges, valued at.....	206,725
250,000 Pounds of tobacco, valued at.....	50,000
1,234 Carloads of vegetables, valued at.....	286,480
1,647 Carloads strawberries, valued at.....	1,209,560
5,104,160 Gals. milk sold per year, valued at.....	1,742,875
801 Carloads cattle shipped, valued at.....	507,650
62 Carloads hogs shipped, valued at.....	41,350
	<hr/>
	\$ 84,440,990
3,183,474,895 Feet lumber, valued at.....	\$ 42,581,073
Output of 125 other factories.....	18,321,850
Output of 13 canning establishments.....	304,300
10,569,500 Barrels of oil, valued at.....	10,571,350
22,000,000 Feet of natural gas, valued at.....	2,550,000
700,000 Tons of sulphur, valued at.....	1,400,000
Output of salt mines.....	1,000,000
Estimated value of cotton seed.....	5,072,000
	<hr/>
Total	\$166,241,563

This does not include the output of 39 cotton seed oil mills, nor any of the industries of the City of New Orleans. The above are the products of the farms, the factories and the mines, exclusive of the two parishes which failed to report.

We also add the producing elements of the various amounts given above:

91	Irrigation plants, valued at.....	\$ 995,600
541	Miles irrigation canals, valued at.....	1,705,600
111	Sugar refineries, valued at.....	20,054,000
224	Other sugar mills, valued at.....	1,641,250
28	Rice mills, valued at.....	1,492,300
39	Cotton seed oil mills, valued at.....	2,230,000
1,073	Cotton gins, valued at.....	1,464,780
486	Saw mills, valued at.....	22,478,820
125	Other factories, valued at.....	7,667,090
13	Canning establishments, valued at.....	304,300
148,097	Horses, valued at.....	6,883,801
118,700	Mules, valued at.....	9,317,146
394,223	Cattle, valued at.....	4,789,333
208,270	Hogs, valued at.....	840,225
85,082	Sheep, valued at.....	140,532
		<hr/>
		\$ 83,004,777
To these figures we add the output as above.....		166,241,663
		<hr/>
Making a total of.....		\$249,246,440

The output of the cultivated lands, 5,000,847 acres, shows \$17.87 per acre were the products of the farms. This does not include the value of the horses, mules, cattle, hogs, sheep and poultry. If, however, we estimate all of the products and producing elements we find that over \$49.00 per acre is the correct valuation for the State, exclusive of the land itself and of the parishes not reporting.

Where can a better showing be made?

There are twenty-two million acres of the same kind of lands still uncultivated and can be bought at from \$5.00 to \$100.00 per acre.

This report should be gratifying indeed to every Louisianian. It proves beyond any doubt that Louisiana is on the upward move agriculturally and that she is capable of giving more to the homeseeker for the same money than any other State. Her climate is excellent; her health is splendid; her soils are fertile; her men are chivalrous, and her women are noble. And with the start she has now, you may well expect to see her take the front place along all agricultural lines and in stock raising in the near future.

All these things taken into consideration make Louisiana the ideal place for homeseekers.

UNIVERSITY OF ILLINOIS LIBRARY

ANNUAL REPORT

MAY 22 1918

OF THE

Agricultural and Industrial Statistics

AND

Crop Report for the Year 1914

OF THE

Louisiana Department of Agriculture and Immigration

HON. E. O. BRUNER, Commissioner

BATON ROUGE
RAMIRES-JONES PRINTING COMPANY
1915

OFFICE OF
Commissioner of Agriculture and Immigration

BATON ROUGE, LA.,

March 1, 1915.

The Louisiana State Bureau of Agriculture and Immigration is a little late in submitting its annual agricultural and industrial statistics, but the delay was to obtain accuracy, and with the exception of three parishes failing to report we confidently believe that the statistics given are as accurate as can possibly be gotten.

Sixty parishes have reported in full and the Assessors who furnish this data to the Department claim that the figures are as accurate as could be gotten. The sugar crop as given is larger than has been claimed by some statisticians, but most of the Assessors claim that they got the actual output of the factories, and the figures we give do not include the crops of two sugar parishes, Assumption and Iberville, from whom we could not hear. Besides the sugar reported, we have 96,070 barrels of syrup, valued at \$1,735,148, made in various parts of the state. A great addition to Louisiana's Larder.

We shall publish in full in pamphlet form a tabulated statement of the State's statistics by parishes, not including Orleans, which is separately accounted for, but the following summary will answer all practical purposes.

438,360 bales of cotton valued at.....	\$15,417,090
30,808,005 bushels of corn valued at.....	20,027,835
409,091,487 pounds of sugar valued at.....	16,550,830
502,308,920 pounds of rough rice valued at.....	11,074,344
298,225 barrels of molasses valued at.....	1,461,962
96,070 barrels of syrup valued at.....	1,735,148
5,224,355 bushels of sweet potatoes valued at.....	2,696,621
1,312,150 bushels of Irish potatoes valued at.....	919,042
328,004 tons of hay valued at.....	3,344,120
1,907,094 bushels of oats valued at.....	1,036,121
347,910 bushels of peanuts valued at.....	325,619
185,400 boxes of oranges valued at.....	133,500

220,000 pounds of tobacco valued at.....	55,000
1,753 earloads of vegetables valued at.....	596,812
1,482 earloads of strawberries valued at.....	1,214,600
5,190,300 gallons of milk sold valued at.....	1,540,300
1,059 earloads of cattle shipped valued at.....	675,725
69 earloads of hogs shipped valued at.....	39,956
Estimated value of cotton seed about...	5,000,000
Output of 17 canning establishments...	446,200
<hr/>	
Total.....	\$84,290,325

The above figures show the products of the soil, but do not include the factories and mines; they show that Louisiana, besides thousands of dollars' worth of products, used at home and not reported, had an acreage production of over \$16.50, notwithstanding the very low prices of some of the products, and also that several thousand acres included in the cultivated lands were for grazing purposes only.

Another point gleaned from this report is that corn, which once ranked third in Louisiana's crops, this year heads the list in valuation—in other words, the crop was worth about \$3,000,-000 more than the next highest in valuation.

For other statistics we give:

2,985,269,000 feet of lumber valued at.....	\$35,036,985
7,821,675 barrels of oil valued at.....	4,448,635
333,000,000 feet of natural gas valued at.....	33,300
Estimated value of sulphur, about....	14,000,000
Estimated value of salt, about.....	1,000,000
Output of 197 other factories.....	25,649,075
<hr/>	
Total.....	\$80,167,995

Seventy-three saw mills failed to give their output of lumber.

The above does not include the output of the cotton seed oil mills nor any of the industries of the City of New Orleans. They are the products of the farms, the factories and the mines, exclusive of the three parishes which failed to report.

We also add the producing elements of the various amounts given above:

76 irrigation plants valued at.....	\$ 2,613,750
662 miles of irrigation canals valued at.....	3,112,900
92 sugar refineries valued at.....	16,204,020
296 other sugar mills valued at.....	2,364,750
26 rice mills valued at.....	1,821,500
33 cotton seed oil mills valued at.....	1,810,330
1,041 cotton gins valued at.....	1,438,900
439 saw mills valued at.....	23,220,020
197 other factories	12,193,970
17 canning establishments	446,200
127,555 horses valued at.....	6,466,563
151,822 mules valued at.....	9,322,573
367,254 cattle valued at.....	4,318,667
174,114 hogs valued at.....	798,854
76,994 sheep valued at.....	196,698
<hr/>	
Total	\$ 86,328,795
Grand total	\$250,787,615
If we add the valuation of the land.....	\$245,298,877
<hr/>	
We have as a result	\$496,086,492

In the above computation we have not taken into consideration the immense quantities of poultry, eggs, honey, butter and home-canned fruits and vegetables, which would add materially to the State's assets, and one other important item is that about 4,000 newcomers have settled in the rural districts of the State, and if the well-known computation of the value of an immigrant to a State is correct—that is, \$1,000 for each settler, then we have added to our State's assets for the year 1914—four millions of dollars.

Be that as it may, the home-seekers are finding out that Louisiana can satisfy them in any way they may wish.

ANNUAL REPORT OF THE AGRICULTURAL AND INDUSTRIAL STATISTICS AND CROP REPORT OF YIELDS, ETC., FOR 1914.

ANNUAL REPORT

OF THE

Agricultural and Industrial Statistics

AND

Crop Report for the Year 1915

OF THE

Louisiana Department of Agriculture and Immigration

GENERAL REMARKS

TABLE OF PERCENTAGES

HON. E. O. BRUNER, Commissioner

Baton Rouge, La.
Ramires-Jones Printing Co.

1916

OFFICE OF COMMISSIONER OF AGRICULTURE AND IMMIGRATION

HON. E. O. BRUNER, COMMISSIONER

BATON ROUGE, LA., March 15, 1916.

In submitting this annual statistical report we have been somewhat delayed in getting the data because of the fact that elections have been going on, but all the parishes of the State have submitted reports, except Acadia, Assumption, Iberville, St. James and West Carroll.

In tabulated form will be given the statistics by parishes except those mentioned above and the Parish of Orleans, which is not included.

For all practical purposes the following summary will be of service in showing at a glance Louisiana's resources:

348,598 bales of cotton, valued at.....	\$16,211,062
30,537,668 bushels of corn, valued at.....	18,003,950
311,952,076 pounds of sugar, valued at.....	12,311,990
467,611,504 pounds of rough rice, valued at.....	8,896,350
140,182 barrels of molasses, valued at.....	711,167
71,701 barrels of syrup, valued at.....	1,606,384
5,675,145 bushels sweet potatoes, valued at.....	2,443,507
1,145,721 bushels Irish potatoes, valued at.....	845,197
307,031 tons of hay, valued at.....	2,902,525
2,110,933 bushels of oats, valued at.....	1,097,012
328,700 bushels of peanuts, valued at.....	126,445
28,200 boxes of oranges, valued at.....	46,800
3,718 carloads of vegetables shipped, valued at.....	938,150
1,422 carloads strawberries shipped, valued at.....	2,515,100
5,712,250 gallons of milk, valued at.....	1,886,320
928 carloads of cattle shipped, valued at....	783,250
70 carloads of hogs shipped, valued at.....	104,000
Estimated value of cotton seed, about...	6,000,000
Output of 16 canning establishments...	235,500
Estimated value of the tobacco crop....	55,000
Total.....	\$77,719,709

The figures as given above are sent in by the Assessors and of course some statisticians will be ready to criticise, but until they can point out a better method of ascertaining this data it might be well to spare such criticism.

Besides the products of the soil as given above, Louisiana's other resources seem illimitable, but it has been impossible to get

for this report her vast revenue from fisheries, oysters, furs, turpentine, etc., which would add many millions more to her resources.

The following are some of the facts gleaned from the reports of fifty-eight parishes:

2,938,899,000 feet of lumber, valued at.....	\$ 41,411,036
31,599,250 barrels of oil, valued at.....	28,990,800
328,500,000 cubile feet of natural gas, valued at..	6,570,000
Estimated value of sulphur, about....	14,000,000
Estimated value of salt.....	1,000,000
Output of various factories.....	28,089,450
<hr/>	
Total.....	\$120,061,286

In the above we have the output of 38 sawmills, but there are 374 more mills in the State, some, of course, very small, but enough of that number would undoubtedly swell the lumber output to considerably over four billion feet.

The above does not include the output of the cotton seed oil mills, nor any of the industries of the City of New Orleans.

Wheat has also been grown in the State, but to what extent has not been ascertained. Several parishes, though, seem to have been right successful with it.

We will now add the producing elements of the various amounts given above:

95 irrigation plants, valued at.....	\$ 823,800
667 miles of irrigation canals, valued at.....	1,496,000
87 sugar refineries, valued at.....	15,349,640
244 other sugar houses, valued at.....	1,922,650
17 rice mills, valued at.....	778,000
40 cotton seed oil mills, valued at.....	2,084,210
1,037 cotton gins, valued at.....	1,427,070
412 sawmills, valued at.....	16,385,890
87 other factories, valued at.....	12,373,440
133,202 horses, valued at.....	6,303,374
109,917 mules, valued at.....	8,630,791
380,207 cattle, valued at.....	4,694,919
200,439 hogs, valued at.....	982,008
55,979 sheep, valued at.....	122,316
<hr/>	
Total.....	\$73,374,118

In the figures given we have not taken into consideration the immense quantities of poultry, eggs, honey, butter and home-canned fruit and vegetables, and, to add further to Louisiana's advancement and resources, we have added 6,000 people to her population, and immigration seems constantly increasing.

The Agricultural Resources of Louisiana and The Crop Report for 1916.

HARRY D. WILSON, Commissioner of Agriculture and Immigration

The Agricultural Department of Louisiana has been somewhat slow in submitting its tabulated statistical report, but it considered accuracy of more importance than haste; and as every parish has been visited and data procured from the most reliable sources, it is confidently believed that no more accurate report of the State's agricultural resources could possibly be obtained.

The following summary shows the aggregate rural productions and when we remember and realize the fact that the city products will about equal the agricultural, the world must recognize that it is a just claim that Louisiana is the El Dorado of America.

Four or five years ago there were but few miles of hard-surfaced roads in the State. Today there are 1,014 miles, and millions of dollars have been appropriated for a continuation of the work.

The following summary from the tabulated report by parishes shows:

442,770 bales of cotton valued at.....	\$ 33,207,750
305,352 tons of sugar valued at.....	36,642,240
44,009,772 bushels of corn valued at.....	35,207,817
482,636 barrels of molasses valued at.....	4,826,360
172,236 barrels of syrup valued at.....	4,305,900
4,627,501 sacks of rice valued at.....	18,510,004
184,725 bushels of peanuts valued at.....	184,725
4,904,130 bushels of sweet potatoes valued at.....	2,452,065
898,000 bushels of Irish potatoes valued at.....	898,000
486,398 tons of hay valued at.....	4,863,980
2,517,930 bushels of oats valued at.....	1,258,965
63,730 boxes of oranges valued at.....	127,460
175,000 pounds of tobacco valued at.....	175,000
4,630 carloads of vegetables valued at.....	2,310,000
1,750 carloads of strawberries valued at.....	1,750,000
9,450 bushels of wheat valued at.....	15,309
200 bushels of rye valued at.....	244
cotton seed valued at.....	8,000,000

Total.....\$154,735,819

1916 cont

21 Aug 20 direct

Making an average acreage production of \$29.62.

These are the actual products of the soil and the valuations conservatively based upon prices which we know to have prevailed during the year; but had we computed the prices in accordance with the government report of December, 1916, the total amount of Louisiana's agricultural products would have been increased by several millions of dollars.

As adjuncts to the above—in fact, as part and parcel of the farm products—we also report:

4,077,720 gallons of milk sold at.....	\$ 815,544
1,551 carloads of cattle sold at.....	1,861,200
386 carloads of hogs sold at.....	463,200
eggs, poultry, honey and fruits not reported, estimated at.....	3,500,000
Total.....	\$ 6,639,944

*Besides these products of the farms, Louisiana's rural districts produce over three billion feet of lumber, about 870,000 tons of sulphur, approximately the same amount of salt, lime rock in great quantities, and fourteen parishes with marvelous productions of oil and gas. Immense quantities of fish, oysters, crabs, and shrimp were canned.

Two new aspirants for agricultural honors in Louisiana have made their appearance: the soy and velvet beans, and from the large quantity that is being planted this year there is an indication that these great legume crops will reach a million acres in 1918, adding twenty millions of dollars to the State's agricultural resources.

We call your attention to the tabulated statement by parishes, in which it will be seen that 5,850 new settlers, exclusive of those to New Orleans, have moved into the State, and also to the lamentable fact that there are only 80,171 sheep in this splendid sheep-raising country. However, we notice in some of the parishes a marked improvement along these lines, and are confident that the near future will bring a prosperous sheep and wool industry to the State which offers every inducement for such.

* In our opinion, if we could get the accurate figures on cattle, hogs, home-made butter, honey, melons and fruits of various kinds canned and sold direct to country merchants and consumers, either fresh or canned, it would amount to at least five million dollars additional, making a grand total of \$166,375,763.

The orange crop we have placed at figures as given by only a few parishes, but it is generally believed that a hundred thousand boxes more were made throughout the entire State. One gentleman from a parish which reported no orange crop told us that he gathered from one tree alone three barrels, and his other trees yielded well. All of these lower parishes of the State are well adapted to citrus culture and it is hoped that this industry will soon be largely expanded.

Realizing and appreciating the necessity of the conservation of our prospective large potato crop, we would earnestly urge those who expect such to seriously consider the great advantage to be derived in taking a percentage of the excess moisture from the potato, thereby assuring its preservation. We believe the potato dry-kiln will do incalculable good, hence we advise its due consideration. We know that in one of the north Louisiana parishes the dry-kiln is not an experiment but an absolute success.

ANNUAL REPORT OF THE AGRICULTURAL AND INDUSTRIAL STATISTICS AND CROP REPORT OF YIELDS, ETC., FOR 1916.

Evangeline	
Franklin	Police Jury will consider bond issue.
Grant	12	And 57 more will soon be completed.
Iberia	12	
Iberville	79	And money provided for a continuation.
Jackson	Police Jury soon to take action.
Jefferson	18	And efforts being made to finish the main road
Jefferson Davis	† See note. [6 miles more.
Lafayette	18	And \$300,000 voted for more.
Lafourche	
La Salle	
Lincoln	Movement started; tax voted for.
Livingston	
Madison	Will be submitted to Police Jury.
Morehouse	
Natchitoches	20	\$250,000 voted to build 60 miles more.
Orleans	
Ouachita	21½	And \$500,000 appropriated for 67 miles.
Plaquemines	33	Shell roads.
Pointe Coupee	½	Bonds issued for \$220,000.
Rapides	34	And \$500,000 to be spent this year.
Red River	1	And 14 miles ready for hard surfacing.
Richland	Eight miles by owners of adjacent land is about
Sabine	† See note. [to be built.
St. Bernard	24	Shell. Six miles of cinders soon to be shells.
St. Charles	32	Bonds issued to build 15 miles more.
St. Helena	
St. James	1	Balance of road, 56 miles, provided for.
St. John Baptist	Election soon for bond issue of \$180,000.
St. Landry	30	
St. Martin	Movement for an election in the parish.
St. Mary	44	Fifty-five miles soon to be completed.
St. Tammany	2	Of shell.
Tangipahoa	40	And money appropriated for 25 miles more.
Tensas	Survey being made to ascertain cost.
Terrebonne	9	Of shell, and now working and grading 40 miles.
Union	
Vermilion	
Vernon	
Washington	
Webster	10	Wards have voted 3 to 10 mills for year.
West Baton Rouge	28	
West Carroll	
West Feliciana	
Winn	1	And question strongly advocated by prominent citizens.
Total	1014	

† Jefferson Davis has appropriated a half million dollars and has contracts for 127 miles.

† Sabine has issued bonds for \$30,000 for 6 or 8 miles of Jefferson Highway.
Our tabulated stock report will be added later on. Some valuable information desired was not available as this goes to press.

MAY 11 1921

Annual Report of the Agricultural and Industrial Resources of Louisiana for 1917

Harry D. Wilson, Commissioner of Agriculture and Immigration

Baton Rouge, La., April 15, 1917

We sought data for our Annual Report with a view of demonstrating the agricultural and industrial wealth of the State of Louisiana by parishes. In our efforts we met a great many difficulties. In some instances we were met with the utmost cooperation on the part of the officials and others, while on other occasions our search was almost futile. In our search for information we went to assessors, sheriffs, farm demonstrators, superintendents of education, business men, farmers, the State Auditor's office, the office of the Board of Affairs, the Conservation Commission, the State Board of Engineers, express companies, railroads, and the United States government employes. Where possible, estimates were made and verification sought elsewhere.

Personal investigation was made of all save six parishes, and owing to war conditions many people were loath to give any information at all, even though for State purposes. Assessors would refer to sheriffs; sheriffs would refer to the Conservation Commission; the Conservation Commission would claim that it did not have the data in the shape in which it was sought. Hard surface road mileage could not be authenticated by the records of the State Engineer's office. Output of commodities by parishes could not be authenticated by the office of the State Auditor or of the Board of Affairs. In some of the parishes even the Judge of the District Court put himself to the trouble to assist in gathering the data for his parish, while in other parishes even

6 July 21 M.E.D.

1917 cont.

Div. g.

6 July 21

the farm demonstrator was not disposed to give any information. Indeed, there was a striking lack of co-operation on the part of the co-ordinate bodies of the State. So courteous and accommodating was Mr. John S. Dennee, of the United States Government Service, that special mention is made of his kindness.

We find the farmers progressive, and in many instances using improved machinery and turning to improved live stock. In almost every instance they seemed to be prosperous. Great interest is being manifested in better roads. This work has been retarded by the war, but with the impetus that has been given this movement by the roads already established the work is still being carried on, and in time it will be demonstrated that Louisiana is one of the best States for agriculture and live stock raising in the Union. For obvious reasons, the entire output of many of Louisiana's commodities are not given, but there are oil, gas, sulphur, salt and lime in abundance, and Louisiana stands second in the United States in lumber output.

A concrete demonstration of the agricultural and industrial wealth of the State the following summary is given:

Cotton crop	\$102,000,000
Corn crop	62,000,000
Sugar, molasses and syrup.....	60,000,000
Rice crop	35,000,000
Sweet potato crop.....	6,000,000
Hay crop	6,500,000
Vegetable crop	3,000,000
Irish potato crop.....	3,000,000
Oat crop	1,750,000
Strawberry crop	1,250,000
Fruit and nut crop.....	2,000,000
Peanut crop	1,750,000
Tobacco crop	75,000
Wheat crop	20,000
Cattle (beef)	22,000,000
Hogs	17,000,000
Dairy cattle and milk crop.....	16,500,000
Sheep and wool.....	2,000,000

Poultry and eggs.....	3,000,000
Horses on farms.....	18,000,000
Mules on farms.....	19,500,000
Miscellaneous crops and by-products.....	5,000,000

Combined value of all these crops, approximately. \$387,000,000

As an indication of the growth of the live stock industry in the State of Louisiana we give herewith the receipts of cattle, sheep and hogs at the Crescent City Stock Yards for the years 1916-1917:

	1916	1917
Cattle	154,628	161,218
Hogs	55,509	69,395
Sheep	4,186	5,501

* In addition to above, there were about 10,000 war gardens, aggregating about 5,000 acres, yielding about 20,000 bushels of sweet potatoes, beans, oats, okra and spinach, besides about 350,000 head of cabbage and lettuce, and with tomatoes, mustard, cucumbers, eggplants and other vegetables there was a value upon these gardens amounting to around \$90,000.

† Includes denuded land.

‡ 8,777 acres Forest Reserve.
